about me

9 years of experience

Computer Engineer from Universidad Nacional del Litoral with nearly 9 years of experience in backend, frontend and mobile software development. I have worked across consulting, retail, e-commerce and financial services, taking part in the full product lifecycle, from analysis to production deployment. I am curious and proactive: I adapt to each company's resources and tools to achieve the best result, and I bring in new solutions, such as artificial intelligence, when they add real value to the product, always with sound technical judgment.

experience

ITTI
Oct 2026 - Nov 2026

Senior Software Engineer / Brokerage and investment funds

Managed and developed the mobile app and the backend services supporting the investment flow across the company's financial assets, including mutual funds. Built the React websites for the corporate client flow. Integrated artificial intelligence tools into the development process to raise the quality and reliability of each delivery from the first iteration.

Flutter / JavaScript / AI / React / Go / MySQL

Astroselling
Dec 2023 - Oct 2026

Software Engineer / Start-up

Software development at a start-up that syncs products across multiple sales channels to help online businesses scale. End-to-end involvement: user support, problem analysis, development of new features and production deployment. Proposed improvements and optimized processes, aligning each technical delivery with customer and business needs.

PHP / Laravel / MySQL / Vue.js / AWS / Git

Mercado Libre
Jan 2022 - Nov 2024

Semi-Senior Software Engineer / E-commerce, retail (1P)

Reduced production errors by 40% on the internal tax management platform for the retail (1P) business by applying sound software design practices and a stronger business logic architecture, which made the system easier to scale and failures easier to trace. Developed the rules engine that determines the applicable tax across countries based on product type and place of residence, on a microservices architecture. Gathered requirements from internal users, defined solutions and coordinated integrations with other teams.

Java / Spring Boot / MySQL / HTML / CSS / TypeScript / JavaScript / jQuery / Git / React / GraphQL / Node.js

Bitwise SA
Jan 2021 - Dec 2022

Full Stack Developer

.NET development at a consultancy serving Sancor Seguros. Delivered features under Scrum, working in constant coordination with analyst and tester teams.

.NET / C# / Vue.js / SQL / HTML / CSS / TypeScript / JavaScript / jQuery / TFS / Git / Web APIs

Musimundo!
Jan 2020 - Jan 2021

Software Developer Analyst

Took part in the complete software development process using agile methodologies, from gathering requirements with the client to delivery and maintenance.

C# / Angular / JCL / HTML / CSS / TypeScript / JavaScript / jQuery / Razor / TFS / Web APIs

what I am looking for

I am looking for a team where I can grow toward software architecture, with real scalability and concurrency challenges. I like understanding systems in detail: horizontal scaling, asynchronous processing with queues and events, race conditions, idempotency, caching strategies and observability. I also enjoy evaluating and implementing emerging technologies and taking them to production when they solve a concrete problem.

education

Computer Engineering
Universidad Nacional del Litoral, Santa Fe - Argentina
2010 - 2018

University Bachelor in Engineering
Universidad Nacional del Litoral, Santa Fe - Argentina
2010 - 2015

Economy and Management of Organizations
E.E.M. N°4 Domingo Faustino Sarmiento, Federación, Entre Ríos - Argentina
2003 - 2008

Introduction to Python and Django
Universidad Tecnológica Nacional (UTN) - San Francisco
2021

Expert in Computer Forensics
Latin American Council for Cybersecurity and Computer Forensic (IACCFC)
2020

PC Assembly and Repair Technician
Instituto Argentino de Computación (IAC)
2007

English
English Academy, Federación, Entre Ríos
2005 - 2007

Mobile Device Programming
Universidad Nacional del Litoral, Santa Fe - Argentina
2017

Bombieri
Jan 2019 - Jan 2020

Full Stack Developer

First experience in enterprise software development. Built web projects on an outsourcing basis as part of a development team.

Web APIs / Web Pages / HTML / CSS / JavaScript

Freelance
Jan 2018 - Jan 2019

Full Stack Developer

Developed my own projects and projects commissioned by companies. Joined ongoing projects to implement improvements and speed up delivery.

C++ / C# / Java / SQL / SQLite / HTML / CSS / JavaScript / jQuery / React Native / Django / Firebase / Python / Git / SVN / TFS

projects

Dojo-IA
dojo-ia.site/

Installable training app that syncs Garmin and Strava activities and analyzes each athlete's training load. It uses AI agents specialized in running, gym training and nutrition to give personalized recommendations and optimize training.

Next.js / TypeScript / Firebase / Claude API / MCP / Fly.io

Web de Candela Mirabete
candelamirabete.com

Professional website for a nutritionist from Federación, Entre Ríos. Custom development with animations, static export, automated deployment and tracking of WhatsApp and Instagram contacts.

Next.js / React / Motion / Google Analytics / GitHub Actions

Turnos de vacunación, Hospital San José
github.com/ERicBastida/HSJturnos

Web application to manage COVID-19 vaccination appointments for Hospital San José in Federación, Entre Ríos. It was built during the pandemic to avoid crowding: each person entered their details, received an appointment and could get a PDF confirmation.

React / Firebase / Bootstrap / JavaScript

BEcopter
github.com/ERicBastida/BEcopter

Final project for my Computer Engineering degree: a platform for guiding and navigating an unmanned aerial vehicle. It includes a Python desktop application to communicate with a quadcopter and manage its flight, with a Raspberry Pi 3 on board.

Python / PyQt / Raspberry Pi / Arduino / UNIX / Drones

Autito Bluetooth
youtu.be/5AODRGsfIk8

Remote-controlled car built on an Arduino UNO board and driven over Bluetooth from my own Android application.

Java / SQLite / C++ / Android Studio / Arduino
